Landfill Lining

## TerraLine-cCL

NEEDLE PUNCHED GEOSYNTHETIC CLAY LINERS

## TerraLine-CCL

TerraLine - Geosynthetic Clay Liners (GCL) are factory made hydraulic barriers consisting of very low-permeability bentonite powder supported by geotextiles and/or geomembranes. The engineering function of a TerraLine -GCL is containment as a hydraulic barrier to water, leachate or other liquids and sometimes gases.

## Applications

- Landfill Lining or Capping: Containment of leachate in construction of landfills (urban, industrial and special solid waste) and reclamation of exhausted landfill sites or contaminated industrial areas.
- Mining: Protection from residual during Heap-leaching mining process.
- Waterproofing: Used in reservoirs hydraulic works, decorative ponds, recreational lakes, open-cut tunnels, underpasses and secondary containment of petroleum storage tanks \& building basements.
- Ground Water Protection: Used for water table protection in transport infrastructures (roads, railways, airports).
- Retaining Structures: Protection of benches in multi - tier retaining and MSE structures.

## Technical Parameters

| Properties |  | Test Method | Unit | Tolerance | TAL 5/310 | TAL 3012 | TAL 4012 | TAL 4512 | TAL 5014 | TAL 5018 |

## NOTES

A. All values are nominal values.
B. These properties may change at the time of handling, storage and shipping.
C. Customized rolls with varying lengths or master rolls can be manufactured.
D. The above values are subject to change as per discretion of the company.
